Open Content Studio

A free studio that turns your videos and teaching into **reels, carousels and posts in your voice.** It runs on your own accounts and connects to no one else's.

By Mike Moll · Helping service founders get on podcasts and generate revenue

20 min	25+	$0
to your first posts	pieces per episode	for the studio

Start today in three steps

01 Install Claude

The Claude desktop app on a paid plan, and Node.js 20 or newer from nodejs.org.

02 Add the studio

In the Code tab, paste these two lines, one at a time.

```
/plugin marketplace add Impact-Leads-LLC/open-content-studio
/plugin install studio@open-content-studio
```

Using Cowork? Upload studio.zip from the latest release instead.

03 Say "quick start"

Answer five questions. A topic you teach becomes a carousel, two posts with graphics and five hooks.

Two ways to run it

Inside Claude Start here

A folder on your computer holds your brand, your material and playbooks you can change. Claude writes, designs and reviews each piece.

The full tool For a team

A web app for you and your team. Supabase holds your data and brain, Vercel runs the app and edits video, and Claude works through the Anthropic API.

What you plug in, and what it costs

TOOL	WHAT IT DOES	COST
Claude desktop app	Runs the studio, and the full tool's setup	From $20 a month
Supabase	Your database, files and brain (full tool)	About $25 a month
Vercel	Hosts the app and edits video (full tool)	About $20 a month, plus usage
Anthropic API	Claude inside the app (full tool)	Pay as you go, up to a limit you set
Your scheduler	ContentStudio or Metricool. Others get files and a CSV	Your plan

The keys, and what each one does

Never paste a key into a chat. The studio inside Claude needs none. The full tool's keys go into Vercel.

KEY	WHAT IT DOES	WHERE IT COMES FROM
`SUPABASE_URL` `SERVICE_ROLE_KEY`	Your database's address and access	Supabase, Project Settings
`ANTHROPIC_API_KEY`	Lets the app call Claude	console.anthropic.com
`BRAIN_MCP_TOKEN` `CRON_SECRET`	Brain access, and protection for the nightly cleanup	The setup makes them
Optional	Scheduler drafts, pictures (about 4 cents each), Drive copies	Each service's settings

The full tool in 10 steps

01 Get the code
Download the full tool from the latest release into a private GitHub repository.

02 Start the setup
Open it in Claude Code and say "set up my studio".

03 Your material
Have ready: your website, offers, booking link, 5 to 10 posts you wrote, testimonials, transcripts, colours, logo and a headshot. It reads them first.

04 The interview
Only what your material left out: clients, voice, proof, tools, preferences and a monthly limit for each service.

05 Supabase
A Pro project, the database script and the brain connector.

06 Your keys
You paste them in. Claude checks the names, never the values.

07 Vercel
A Pro project, its settings and your spend limit, then deploy.

08 The editors
Upload the five cloud video editors with one command.

09 Accounts
Your owner account first, then your team.

10 The test
One idea in, a post and a carousel out, and the post ready for your scheduler.

Want to be a guest on other people's shows?

One podcast interview gives this studio **25+ pieces to post.** In a free 20-minute assessment, we'll look at your personal brand, your guesting readiness and where podcasts fit into your marketing.
