Open Content Studio: setup guide

What you need, how it connects, and the steps · Free under the MIT License · November 2026

A free studio that turns your videos and teaching into reels, carousels and posts in your voice. It runs on your own accounts and connects to no one else.

20 min	25+	$0
to your first carousel and posts	pieces from one full episode	for the studio itself

Start today in three steps

01 **Install Claude**
The Claude desktop app on a paid plan, and Node.js 20 or newer.

02 **Add the studio**
Code tab: /plugin marketplace add Impact-Leads-LLC/open-content-studio, then /plugin install studio@open-content-studio. Cowork: upload studio.zip from the latest release.

03 **Say "quick start"**
Five questions, then one topic you teach becomes a carousel, two posts with graphics and five hooks.

Two ways to run it, and how they connect

Version 2, inside Claude. A folder on your computer holds your brand, your material and the playbooks you can change. Claude writes, designs and reviews each piece.

Version 1, the full tool. A web app for a team: Supabase holds your data and brain, Vercel runs the app and edits video, and Claude works through the Anthropic API.

Tool	What it does	Cost
Claude desktop app	Runs the studio, and the full tool's setup	From $20 a month
Supabase	Database, files and your brain (full tool)	About $25 a month
Vercel	Hosts the app and edits video (full tool)	About $20 a month, plus machine time
Anthropic API	Claude inside the app (full tool)	Pay as you go, with your own limit
Your scheduler	ContentStudio and Metricool connect. Others get files and a CSV	Your plan

The keys, and what each one does

Version 2 needs none. For Version 1, you paste each key into Vercel yourself. **Never paste a key into a chat.**

Key	What it does	Where it comes from
SUPABASE_URL, SERVICE_ROLE_KEY	Your database's address and access	Supabase: Project Settings
ANTHROPIC_API_KEY	Lets the app call Claude	console.anthropic.com
BRAIN_MCP_TOKEN, CRON_SECRET	Brain access, cleanup protection	The setup makes them
Optional: scheduler, fal, Drive	Drafts, pictures (about 4 cents each), Drive copies	Each service's settings

The full tool in 10 steps

01 **Get the code**
Download the full tool from the latest release into a private GitHub repository.

02 **Start the setup**
Open it in Claude Code and say "set up my studio".

03 **Your material**
Have ready: your website, offers, booking link, 5 to 10 posts you wrote, testimonials, transcripts, colours, fonts, logo and a headshot. It reads them first.

04 **The interview**
Only what your material left out: clients, voice, proof, tools, preferences and a monthly ceiling per service.

05 **Supabase**
A Pro project, the database script, and the brain connector.

06 **Your keys**
You paste them in. Claude checks the names, never the values.

07 **Vercel**
A Pro project, its settings and your spend limit, then deploy.

08 **The editors**
Upload the five cloud editors with one command.

09 **Accounts**
Your owner account, then your team.

10 **The test**
One idea in, a post and a carousel out, a draft in your scheduler.

Free and as is, from Mike Moll, mikemoll.co.
